

System

Startup

Reopen last logfiles

If checked, SPHW LogViewer will automatically open all tabs which were open right before you closed it.

The files opened with [Program arguments](#) do not get considered as last open file(s).

Reopen last Monitored Folder

If checked, SPHW LogViewer will automatically start watching the last watched folder.

If you start the SPHW LogViewer with Program arguments which has a folder path as the first argument, it will start watching this folder. All other paths will be ignored then.
